

overview

technology

Randstad Pharma's technology team is focused on helping our clients meet their technology and compliance needs in FDA regulated industries. We maintain extensive experience and expertise in staff augmentation, project management, and full lifecycle outsourced solutions while understanding the difficulty of working in a highly regulated environment.

We focus on obtaining the right talent for your job. Whether it's an industry match, skill match, or the right cultural fit for you, Randstad Pharma will do whatever is necessary to meet our client's needs. Our philosophy and history demonstrate our true commitment to building long-term partnerships by offering flexibility and a true understanding of the industry we work within.

Functional Services

Randstad Pharma has a hybrid ideology: we combine the functional services offered by the large consulting companies with tried and true, experienced technology staffing solutions, in the most cost-effective, efficient manner possible. Compared to the traditional model that employs direct hire staffing, a contract approach greatly reduces overhead, a cost benefit that is passed on directly to the client.

Randstad Pharma also has the ability to provide full lifecycle project work. We have been responsible for building proprietary clinical systems, implementing "off the shelf" software, total system maintenance, and software upgrade and rebuild projects. We can also provide validation services in order to ensure these applications are FDA compliant. These projects can be done completely independently with our own project management team, or under the direction of your management team.

Staffing Solutions

- Application Development
- Project Management
- Validation
- Business Analysis
- Help Desk
- Technical Architecture
- GxP Compliance
- Interface Design
- Content Management
- IT Strategy
